EXTENSION
Magento 2 Extension Category Specific Prices

REST API

The API package exposes separate CRUD and search routes for customer and customer-group category prices.

```
composer require mageb2b/pricesystem-categoryprice-api:*
php bin/magento setup:upgrade
php bin/magento cache:flush
```

Resource	Method and endpoint
Read customer record	`GET /V1/pricesystem/categoryprice/:id`
Search customer records	`GET /V1/pricesystem/categoryprice/search`
Create customer record	`POST /V1/pricesystem/categoryprice`
Update customer record	`PUT /V1/pricesystem/categoryprice/:id`
Delete customer record	`DELETE /V1/pricesystem/categoryprice/:id`
Read group record	`GET /V1/pricesystem/categoryprice/customergroup/:id`
Search group records	`GET /V1/pricesystem/categoryprice/customergroup/search`
Create group record	`POST /V1/pricesystem/categoryprice/customergroup`
Update group record	`PUT /V1/pricesystem/categoryprice/customergroup/:id`
Delete group record	`DELETE /V1/pricesystem/categoryprice/customergroup/:id`

Search routes accept Magento `searchCriteria` parameters. Use a Magento integration

with the matching Category Price ACL permissions: `manage`/`manage_customer_group` for reads, `save`/`save_customer_group` for writes and `delete`/`delete_customer_group` for deletes.

These endpoints manage records. The Pricesystem REST API provides calculated-price operations.
