API (Customer Product)

Custom Catalog Documentation · /custom-catalog/features/api

Add-On: Yes. REST endpoints under `/V1/customcatalog` are available via the optional `mageb2b/customer-catalog-api` package.

The base `mageb2b/custom-catalog` module provides PHP service contracts and assignment logic; REST endpoint exposure is add-on scope.

Endpoints:

- GET `/V1/customcatalog/:id`
- GET `/V1/customcatalog/search`
- POST `/V1/customcatalog`
- PUT `/V1/customcatalog/:id`
- POST `/V1/customcatalog/savebulk`
- DELETE `/V1/customcatalog/:id`
- POST `/V1/customcatalog/deletebulk`

Notes:

- You can configure which customer/product attribute codes are used by the API instead of entity IDs.
- Cart refresh behavior depends on integration path and active module configuration.
