| Sample Data

The optional `mageb2b/customerdocuments-sample-data` package adds demonstration records for evaluation and local development.

Do not install it in production. The example documents and assignments are intended to demonstrate the feature, not to represent customer data, retention policies or a production access model.

```
composer require mageb2b/customerdocuments-sample-data:*
php bin/magento module:enable
MageB2B_CustomerDocumentsSampleData
php bin/magento setup:upgrade
```

After installation, inspect the sample records under **Customers > Customer Documents** and test them only with non-production users. Keep useful sample data while preparing a demo or screenshot set, and replace it with coherent fictional records when the scenario requires different relationships.

Two command-line helpers ship with the package:

```
php bin/magento sampledata:verify:customerdocuments # check
that the sample records are present and consistent
php bin/magento sampledata:reset:customerdocuments # remove
and recreate the sample records
```
