Specific Prices](#)

Configuration

Open **Stores > Configuration > MageB2B > Pricessystem**. The Customerprice section controls the CSV download in the customer account. Shared calculation settings are documented under [Pricessystem configuration](#).

Customer price settings

Setting	What it does	Default
Enable download link	Adds the personal price CSV to the signed-in customer's account	Yes
CSV delimiter	Separates columns in the generated file	Semicolon (;)
CSV encloser	Wraps text fields that need quoting	Double quote (")

Use a delimiter that matches the spreadsheet software used by your customers. A semicolon is often easier in locales where a comma is the decimal separator.

Shared price selection

Pricessystem Core can select the lowest price, highest price, or the first available price in a configured priority list. If a customer-specific price should take precedence, place [customer_price](#) before the competing price codes in the priority list.

Read [how price selection works](#) before changing this setting on a live store. A global change can affect every installed Pricessystem price type.

After saving the configuration, clear the Magento cache and test with a customer account that has one known customer price.
