Public View and QR Codes

Digital Product Passport (DPP) Extension · /dpp/features/public-view

Each published passport is available as a public view page, with optional QR codes for easy access.

Public View

The standard view URL uses the passport ID:

- `/dpp/index/view/id/{passport_id}`

If GS1 Digital Link is enabled, GTIN-based URLs will also resolve to the same passport.

Only published passports are publicly accessible.

JSON-LD On View Route

The same view route can return JSON-LD when the request asks for JSON:

- Send Accept: `application/ld+json` (or `application/json`)
- Response is limited to published passports
- Not found/non-published returns `404`

QR Codes

QR codes can be displayed on the product page to link directly to the passport view. This helps customers scan and access the passport quickly.

QR image endpoint:

- `/dpp/index/qr?id={passport_id}`

If the passport is not published (or not found), the QR endpoint returns `404`.
