Database Reference

The Digital Product Passport model is deliberately small: a passport belongs to a Magento product and a Store View.

Relationship	Why it matters
<code>dpp_passport</code> belongs to one <code>catalog_product_entity</code>	Connects passport content and identifiers to the product they describe.
<code>dpp_passport</code> belongs to one <code>store</code>	Allows passport content and publication state to vary by Store View.

Use the passport management UI or service contracts for changes so validation and publication behavior remain intact.
