Multi-address shipping

Multi-address shipping lets a signed-in customer split one cart across several delivery addresses. The complete process stays in the One Step Checkout design: the customer assigns products, selects shipping details for each destination, enters the billing information, reviews the grouped order and places it from the same checkout flow.

Magento creates a separate order for every delivery address. Each order receives its own order number, shipping address, shipping method and totals, while the customer chooses one billing address and payment method for the checkout.

Enable the feature

Both Magento and One Step Checkout must allow multi-address shipping:

1. Open **Stores > Configuration > Sales > Multishipping Settings** and enable **Allow Shipping to Multiple Addresses**.
2. Check **Maximum Qty Allowed for Shipping to Multiple Addresses** and choose a limit that suits your catalog and fulfillment process.
3. Open **Stores > Configuration > MageB2B > One Step Checkout > Multi-Address Shipping** and set **Enable** to **Yes**.
4. Save the configuration and clear the Magento configuration cache.

The **Ship to Multiple Addresses** link appears in One Step Checkout only when all of these conditions are met:

- the customer is signed in;
- the cart contains physical products and has no quote error;
- One Step Checkout and its multi-address option are enabled;
- Magento's own multi-address setting is enabled;
- the cart stays within Magento's configured quantity limit.

Guest checkouts and carts containing only virtual products continue through the regular one-page checkout. If a customer enters Magento's native multi-address route directly, the module sends an eligible checkout into the integrated flow as well.

1. Assign products to addresses

The first step lists every shippable product and quantity in the cart. The customer can assign each quantity to a saved address, enter another address or remove an item before continuing. Splitting a quantity creates separate rows so that units of the same product can be sent to different destinations.

Ship to Multiple Addresses

The screenshot shows the "Ship to Multiple Addresses" checkout step. At the top, there's a progress bar with four steps: "1 Select Addresses", "2 Shipping Information", "3 Billing Information", and "4 Place Order". The "1 Select Addresses" step is highlighted with a red circle. Below the progress bar, there's a text prompt: "Please select a shipping address for applicable items." Below this is a table with three columns: "Product", "Qty", and "Send To". The table has three rows of products. Each row has a "Remove Item" link in the "Actions" column. At the bottom of the table, there's a "Back to Shopping Cart" link and three buttons: "Update Qty & Addresses", "Enter a New Address", and "Go to Shipping Information".

Product	Qty	Send To	Actions
Fusion Backpack	1	Maya Carter, 654 Industry Drive, Houston, Texas 77001, United States	Remove Item
Crown Summit Backpack	1	Maya Carter, 1100 Commerce Center, Pasadena, Texas 77502, United States	Remove Item
Wayfarer Messenger Bag	1	Maya Carter, 1800 Shipping Lane, Baytown, Texas 77520, United States	Remove Item

2. Select shipping details for each address

The shipping step groups the assigned products by destination. For each address, the customer selects one of the available Magento shipping methods. When the corresponding checkout extras are enabled, each destination can also have its own preferred delivery date and gift message.

Delivery dates are checked against the configured lead time, available weekdays and blackout dates. Shipping rates still come from the active Magento carriers and their normal country, cart and customer-group rules.

Continue to Billing Information

Back to Select Addresses

3. Enter billing and payment information

The billing step uses one billing address and one payment method for the checkout. The customer can change the billing address before continuing. If order comments or newsletter signup are enabled, those fields appear here as well.

An order comment applies to every order created by this checkout. Address-specific delivery dates and gift messages remain attached to their respective deliveries.

Ship to Multiple Addresses

The image displays the "Billing Information" step of a multi-address checkout process. At the top, a progress bar shows four steps: "Select Addresses", "Shipping Information", "Billing Information" (the current step, highlighted with a red circle and the number 3), and "Place Order" (highlighted with a red circle and the number 4). The main form area is divided into two columns. The left column, titled "Billing Address" with a "Change" link, contains the address: "Maya Carter", "654 Industry Drive", "Houston, Texas, 77001", "United States", and "T: (713) 555-0148". The right column, titled "Payment Method", has four radio button options: "Check / Money order" (selected), "Purchase Order", "Bank Transfer Payment", and "Cash On Delivery". Below these is an "Order Comment" section with a text area containing "Please deliver each shipment to the receiving desk during business hours." and a note stating "This comment is added to every order created by this checkout." At the bottom of the form, there is a checkbox for "Subscribe to our newsletter" which is currently unchecked. Two buttons are at the bottom: an orange "Go to Review Your Order" button on the left and a blue "Back to Shipping Information" link on the right.

4. Review and place the orders

The final review groups products, shipping methods, delivery details and totals by address. Customers can return to the relevant step to correct an address, shipping method or billing selection before placing the orders.

The displayed grand total covers all destinations. Selecting **Place Order** runs Magento's multi-address order process and creates one order per shipping address.

Order confirmation

After a successful checkout, the One Step Checkout confirmation page lists every generated order number together with its delivery address. Signed-in customers can open the individual orders from this list.

The screenshot shows the LUMA One Step Checkout confirmation page. At the top, a dark grey header bar contains the text "Welcome, Maya Carter!" and "Default Store View". Below this is the LUMA logo and a search bar. A navigation menu lists various categories: What's New, Women, Men, Gear, Training, Sale, PS Industrial, PS Tools, PS Office, PS Electronics, PS Safety, and PS Automotive. The main content area is divided into three sections. The left section, titled "Thank you for your order!", features a green checkmark icon and a message: "A confirmation email with your order numbers and shipping details is on its way." The middle section, titled "Your Orders", lists three orders with their respective order numbers and shipping addresses. The right section, titled "Order Details", shows "Orders: 3" and a message: "Each shipment has its own order number and delivery address." At the bottom right, there is an orange button labeled "Continue Shopping".

What is stored on each order?

Each generated Magento order keeps the products, quantities, shipping address, shipping method and totals for its own destination. Preferred delivery dates and gift messages remain address-specific. A shared order comment is copied to every order so the note is not lost when Magento separates the cart into several orders.

Open the resulting records under **Sales > Orders** to verify the individual order numbers, addresses and checkout extras.
