EXTENSION
Magento 2 Extension Payment Profiles

Installation

Make sure the SoftwareSilo Composer repository is configured and create a current backup or deployment rollback point.

Replace `repo.softwaresilo.io`, `softwaresilo`, `https://repo.softwaresilo.io/` and `<token>` with the repository details shown under **Account > Licenses** in your SoftwareSilo account — see Installation & Updates.

```
composer config bearer.repo.softwaresilo.io <token>
composer config repositories.softwaresilo composer
https://repo.softwaresilo.io/
composer require mageb2b/payment-profile:*
php bin/magento module:enable MageB2B_ExtensionManager
MageB2B_PaymentProfile
php bin/magento setup:upgrade
```

Production-mode stores normally require dependency injection compilation and static-content deployment. Follow your normal release process, then clear the Magento cache.

Verify the installation

```
php bin/magento module:status MageB2B_PaymentProfile
```

The module should be enabled. Administrators with the required permissions should see:

- `Stores > Configuration > MageB2B > Payment Profile`
- `Customers > Payment Profiles`

Important: defaults on a fresh installation

The extension ships with **Enable = Yes** and **Hide all payment methods when no allowed method is resolved = No** — so a fresh installation changes nothing at checkout until profiles exist.

Review the no-match setting in Configuration before going live. Switching it to **Yes** hides every payment method for any buyer whose evaluation produces no allowed method — test each intended audience and website first.
