Admin Permissions (ACL)

Payment Profile adds four ACL resources so you can give sales or support users access without full admin rights.

Where to configure roles

In Magento Admin go to **System > Permissions > User Roles** and create or edit a role. The permissions appear under **Payment Profile** in the role resource tree.

What maps to what

Admin area	Required ACL
Customers > Payment Profiles menu and profile grid	<code>MageB2B_PaymentProfile::paymentprofiles</code>
Create, edit and save a profile	<code>MageB2B_PaymentProfile::save</code>
Delete one or many profiles	<code>MageB2B_PaymentProfile::delete</code>
Stores > Configuration > MageB2B > Payment Profile	<code>MageB2B_PaymentProfile::config</code>

Notes on the save permission

`::save` also covers the form's AJAX helpers: the customer picker grid and the website-dependent **payment-method reload**. A role without `::save` can open the grid but cannot open the editor — the method list would also fail to refresh. Grant `::save` together with `::paymentprofiles` for anyone maintaining profiles.

Notes on the delete permission

`::delete` covers both the single-profile **Delete** action and the grid **mass delete**. The mass action is enforced server-side since version 1.0.10 — hiding the button in a custom theme is not a substitute for the ACL.

Suggested role split

Role	Resources
Read-only reviewer	<code>paymentprofiles</code>

Role	Resources
Profile maintainer	<code>paymentprofiles</code> + <code>save</code> (+ <code>delete</code> only if cleanup is part of the job)
Store administrator	All four, plus the config resource
