Advanced Config

Advanced Config controls how Pricesystem chooses among available price types. It can set selection rules and priority lists for individual customers or customer groups, and it can calculate a result from a formula.

These are shared Pricesystem rules. Price List still determines which lists and product rows apply.

```
composer require mageb2b/pricesystem-advancedconfig:*
php bin/magento setup:upgrade
php bin/magento cache:flush
```

Use the Advanced Config guide for setup and precedence. Price List participates in these rules under the `pricelist` price code.
