Run The Queue Consumer

Pricing System Overview · /pricesystem/price-adjustment/run-the-consumer

Price Adjustment jobs are processed by this consumer:

- Consumer name: `mageb2b.pricesystem.price_adjustment.consumer`
- Queue: `mageb2b.pricesystem.price_adjustment.queue`
- Connection: `db`

Start The Consumer

Run on your Magento server:

```
php bin/magento queue:consumers:start  
mageb2b.pricesystem.price_adjustment.consumer
```

Monitor Job Status

In the admin UI, jobs move through:

- `queued` -> `processing` -> `completed`

If a job fails, it is marked as:

- `failed`

and the error message is stored on the job.

Notes For Production

- Run the consumer as a supervised process (systemd/supervisord/k8s).
- If you do not run the consumer, jobs will stay in `queued` state and no prices are updated.
