Matrix Prices](#)

Database Reference

Product Customer Matrix separates the price rule from the product conditions and direct customer assignments that make the rule eligible.

Relationship	Why it matters
<code>pricesystem_product_customer_matrix_attribute</code> belongs to one <code>pricesystem_product_customer_matrix</code>	Defines the product attributes, categories or identifiers matched by a matrix.
<code>pricesystem_product_customer_matrix_customer</code> assigns a matrix to one <code>customer_entity</code>	Gives a named customer direct access to the matrix price.
A matrix customer-attribute value is matched against the configured customer attribute	Allows one matrix to apply to customers that share a business attribute without creating individual assignments.

The matrix itself contains the commercial rule, including website, validity, quantity and priority settings. Use the matrix editor, import add-on or APIs for updates.
