Installation

Requirements

- Magento 2 installed and working
- Composer access to MageB2B packages

Install

Replace `repo.softwaresilo.io`, `softwaresilo`, `https://repo.softwaresilo.io/` and `<token>` with the repository details shown under **Account > Licenses** in your SoftwareSilo account — see [Installation & Updates](#).

```
composer config bearer.repo.softwaresilo.io <token>
composer config repositories.softwaresilo composer
https://repo.softwaresilo.io/
composer require mageb2b/productfee:*
php bin/magento module:enable MageB2B_ExtensionManager
MageB2B_Productfee
php bin/magento setup:upgrade
php bin/magento setup:di:compile
php bin/magento cache:flush
```

If your setup requires static content deployment:

```
php bin/magento setup:static-content:deploy
```

Admin permissions

The module defines three ACL resources under **System > Permissions > User Roles**:

- **Catalog > Product Fee Types** — manage fee types
- **Catalog > Product Fee Assignments** — manage product assignments
- **Stores > Settings > Configuration > Product Fees Configuration** — change the configuration section

Grant them to admin roles that manage fees; read-only roles can keep them disabled.

Uninstall

```
php bin/magento module:uninstall MageB2B_Productfee
php bin/magento cache:flush
```
