Pricing Visibility

You can show or hide prices on the Quick Order page. The setting affects the Quick Order presentation; it does not replace Magento's catalog pricing or customer-group rules.

Product images and product-type badges are configured separately, so each can be shown or hidden without changing the other choices.

Tier Prices

When enabled, tier prices appear as a hint so buyers can see available quantity breaks before ordering. Search and catalog results use the active storefront and customer context, including applicable final prices.

Test price visibility while signed in as each intended customer group. An administrator's catalog view is not a reliable check for customer-specific or group-specific prices.
