Customer conditions

The condition builder includes the standard Magento address and product conditions plus four customer fields:

- Customer ID
- Customer Email
- Customers
- Is Logged In

Customers opens an Admin chooser and stores a list of customer IDs. Use `is one of` to include that list or `is not one of` to exclude it.

Customer ID, email and chooser conditions are most useful for signed-in customers. A guest normally has no customer ID. Use **Is Logged In = No** for a rule intended for guests, then combine it with address or cart conditions if needed.

Example: hide account-only delivery for guests

1. Add **Customer > Is Logged In** and set it to No.
2. Target the account-only carrier and method.
3. Add **Hide Method**.
4. Select all store views and customer groups in which guest checkout can occur.

Test the same cart once as a guest and once as a signed-in customer.
