Carrier and method targets

Targets decide which collected shipping rates a rule may change. Exclude rows are checked first, then include rows.

Exact target

Select a carrier and method for the safest match. Common code pairs include `flatrate/flatrate` and `tablerate/bestway`.

If the carrier is empty and a method is entered, that method code can match across carriers. Avoid this broad form unless the shared code is intentional.

Conditions

Targets (Carrier / Method) /

Targets (Carrier / Method)

20 per page 1 of 1

Exclude	Carrier	Method	Match Type	Pattern (LIKE)	Actions
No	Flat Rate	Fixed	Exact	Not used	Delete
Used for Exact match. Ignored when Match Type is Like (%). Used when Match Type is Like (%). If Carrier Code is set, the pattern matches the Method Code. If Carrier Code is empty, the pattern matches "carrier_method" (e.g. tablerate_bestway). Use % and _ wildcards.					

Add Target

Actions

20 per page 1 of 1

Sort	Action	Amount	Title	Message	Actions
10	Rename Method Title	Not used	Contract delivery - Germany	Not used	Delete
Used for price actions only (Fixed/Percent/Replace/Min/Max). Used for Rename actions only.					
20	Replace Price	12.5000	Not used	Not used	Delete
Used for price actions only (Fixed/Percent/Replace/Min/Max). Used for Rename actions only. Used for Disable with message only.					

Add Action

Pattern target

Like (%) supports two wildcards:

- % matches any number of characters
- _ matches one character

With a carrier selected, the pattern is compared with the method code. Without a carrier, it is compared with `carrier_method`. Matching is case-insensitive.

Examples:

- carrier `tablerate`, pattern `best%` matches its methods beginning with `best`
- no carrier, pattern `tablerate_%` matches every Table Rate method
- no carrier, pattern `%_freeshipping` matches that method code across carriers

Include and exclude behavior

- An exclude match always removes the rate from the rule's target set.
- If at least one include exists, another rate must match an include to be affected.
- With only excludes, every other rate is affected.
- With no targets, every collected shipping method is affected.

Use exact includes during initial testing. Pattern and exclude-only rules should be checked whenever a carrier integration adds or renames methods.
