EXTENSION  
[Magento 2 Extension Shipping Conditions](#)

# Installation

Install the package from the Magento project directory with the Composer access provided by SoftwareSilo:

```
composer require mageb2b/shipping-conditions
php bin/magento module:enable MageB2B_ExtensionManager
MageB2B_ShippingConditions
php bin/magento setup:upgrade
```

For production mode, follow your normal deployment process for compilation and static content.

Verify the module:

```
php bin/magento module:status MageB2B_ShippingConditions
```

An Admin role with **Shipping Conditions > Manage Rules** permission can now open **Stores > Shipping Conditions**.

The extension has no indexer, cron job or queue consumer to start. Continue with [Create your first rule](#).
